

## CO2 Surface Facilities - PF-81

### COURSE

#### About the Course

This course emphasizes the effect of carbon dioxide on the selection and operation of equipment (separators, compressors, and dehydrators), as well as sweetening process equipment. This program, first introduced in 1985, assists those working with carbon dioxide or high carbon dioxide content natural gas. This course is particularly applicable to those persons who operate and/or design enhanced oil recovery (EOR) facilities using CO<sub>2</sub> as a miscible agent. Physical and thermodynamic property data for carbon dioxide/natural gas mixtures are discussed. Calculations are performed to illustrate principles and techniques. An extra day will be added to this course if a plant tour is available (Midland public course sessions, or in-house sessions only).

#### Target Audience

Engineers and senior operating personnel involved with carbon dioxide/natural gas/CO<sub>2</sub> EOR systems.

#### You Will Learn

- What to expect over the life of a CO<sub>2</sub> EOR system
- Impact of CO<sub>2</sub> on the design and operation of oil production equipment
- Physical and thermodynamic properties of pure CO<sub>2</sub>, and the impact of CO<sub>2</sub> in hydrocarbon mixtures
- Dehydration of high CO<sub>2</sub>-content gases
- Best practices to deal with Dense Phase pipelines, metering, flaring etc.
- How to pump and compress CO<sub>2</sub>
- Using purification processes: membranes, Ryan-Holmes, amines, hot carbonate, etc.

#### Course Content

- Overview of CO<sub>2</sub> injection and process facilities
- Heavy emphasis on CO<sub>2</sub> for enhanced oil recovery
- Physical and thermodynamic properties of CO<sub>2</sub> and high CO<sub>2</sub> mixtures
- Materials selection and design consideration in CO<sub>2</sub> systems
- Process vessel specification
- Pumps and compressors
- Fluid flow and special pipeline design considerations such as the control of ductile fractures
- Dehydration of CO<sub>2</sub> and CO<sub>2</sub>-rich gases

- General overview of processes to treat/recover CO2
